

KATTCARE™ Program

KATTCARE™ On-Site is an all-encompassing system of care to ensure products are installed correctly and the installer and end user are left feeling confident. We have a team of trained technicians that are experienced in overseeing and ensuring systems are installed correctly as well as efficiently. This is a 'support only' program and is not a physical installation service.

COMPLIANCE

We know the Law. We will ensure the system is installed correctly and in compliance with OSHA and FIXFAST USA requirements.

LIABILITY

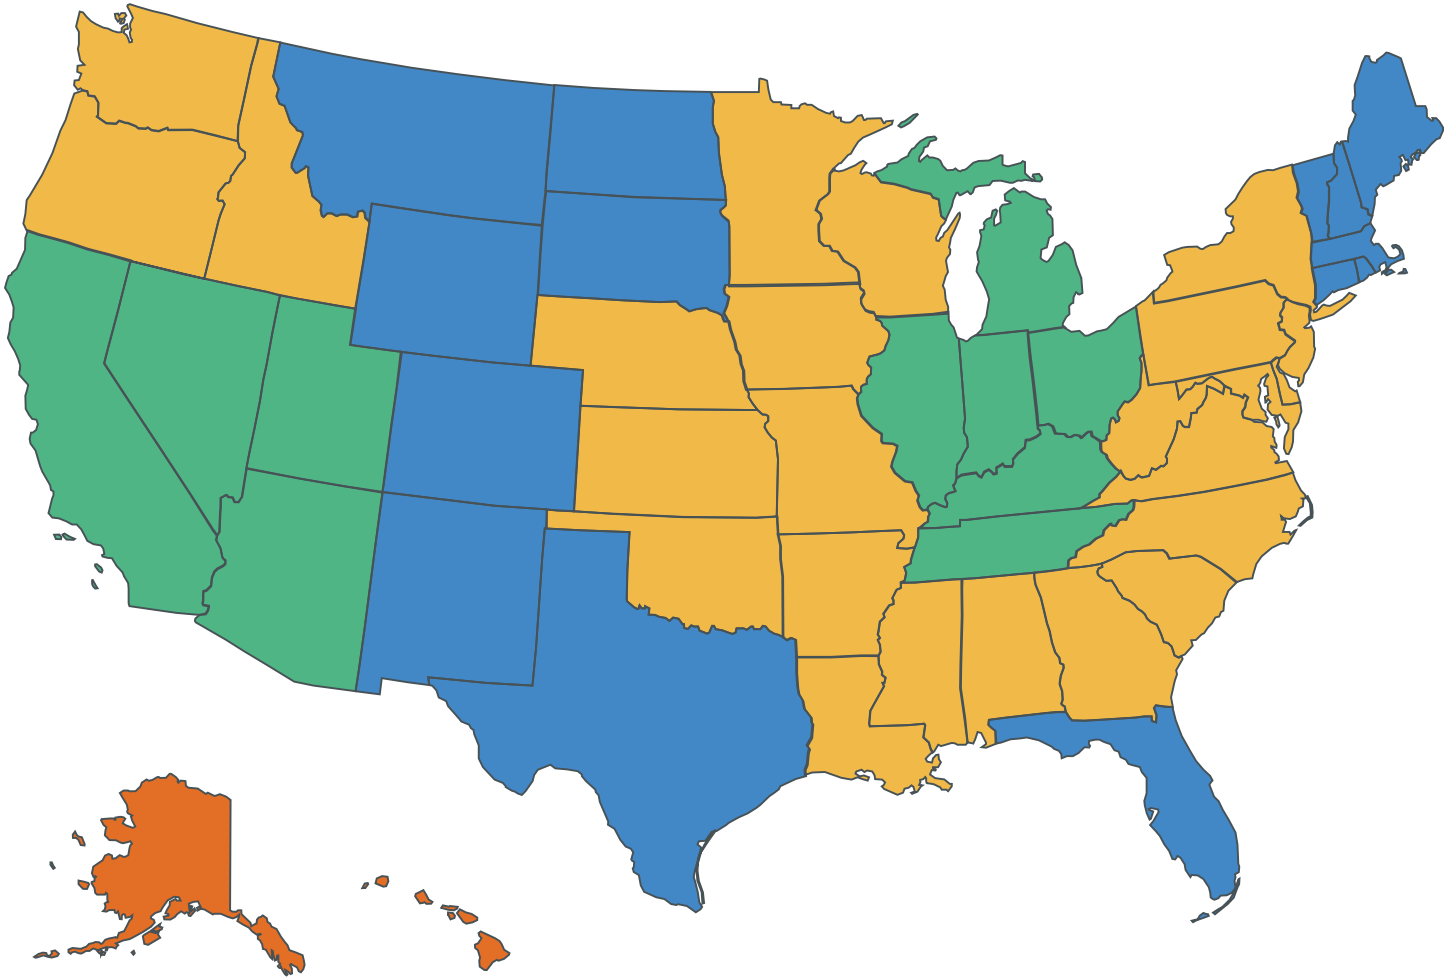

If products and systems are not installed correctly or per the installation guidelines, as an installer, you are liable. KATTCARE™ helps reduce liability overall.

INSPECTION REPORTS

Once an active system is installed, our technicians will inspect and provide a report to confirm it is safe for use until the next inspection is required. Lifeline systems and other fall arrest type products are considered 'active systems'.

CONFIDENCE

We are the experts. Increase confidence when you can inform your client that there will be a trained manufacturer technician on-site during or at periods during the installation phase.

- Zone One
- Zone Two*
- Zone Three*
- Zone Four*
